# **Chapter 1**

## **Compute Service REST API Documentation**

### **1.1 Purpose**

This guide provides a reference for the Compute Service REST API. You can use this API to programmatically manage your compute environment.

### **1.2 Audience**

Use this guide if you are responsible for writing applications to manage the compute environment.

## Chapter 2

# Module Index

### 2.1 Modules

Here is a list of all modules:

Compute Service REST API . . . . .	7
Operations On VM . . . . .	8
Get VM Information . . . . .	13
Power Off VM . . . . .	15
Power On VM . . . . .	16
Reset VM . . . . .	17
Suspend VM . . . . .	18
Resume VM . . . . .	19
Clone VM . . . . .	20
Delete VM . . . . .	22
Get VM Management Action List . . . . .	23
Update VM Instance Type . . . . .	25
Get VM List . . . . .	27
Get VM's Virtualnic Information . . . . .	28
Get VM's Virtualnic List . . . . .	29
Operations On VDC . . . . .	9
Upload Image To VDC . . . . .	32
Deploy NFS server . . . . .	37
Get VDC Information . . . . .	38
Get VDC List Under Organization . . . . .	40
Get Network List . . . . .	42
Get Network Information . . . . .	43
Enable NFS access to Atmos . . . . .	44
Resync NFS access to Atmos . . . . .	46
Operations On ORG . . . . .	10
List Uploaded Image . . . . .	30
Delete Uploaded Image . . . . .	34
Deploy Uploaded Image . . . . .	35
Get Organization List . . . . .	48
Get Organization Information . . . . .	49
Get Task . . . . .	50
Get Task List . . . . .	52
Error Code . . . . .	11

Failed Response . . . . .	53
DuringDeleting . . . . .	54
ReservedName . . . . .	55
UnsupportedVersion . . . . .	56
DeployBadVMImageLackVMDK . . . . .	57
DeployBadVMImageLackVMX . . . . .	58
UploadImageAmountQuotaReached . . . . .	59
UploadImageSizeQuotaReached . . . . .	60
UploadFileFailed . . . . .	61
XMLValidationError . . . . .	62
XMLMalformed . . . . .	63
InvalidName . . . . .	64
InvalidState . . . . .	65
InvalidArgument . . . . .	66
ConcurrentAccess . . . . .	67
VMCannotGetState . . . . .	68
VMOperationFailed . . . . .	69
VMSetInstanceTypeFailed . . . . .	70
DeployInvalidMD5 . . . . .	71
DeployInvalidManifestCountNotEqual . . . . .	72
DeployInvalidManifestIndexNotCorrect . . . . .	73
DeployBadVMImageInvalidConfig . . . . .	74
DeployImageNotFound . . . . .	75
DeployManifestFileNotFound . . . . .	76
DeployImageZipPartNotFound . . . . .	77
AuthenticationError . . . . .	78
NoPermission . . . . .	79
ObjectNotFound . . . . .	80
NoLongerExist . . . . .	81
NotSupported . . . . .	82
CommonPortalLastCaaSAdmin . . . . .	83
ObjectDuplicated . . . . .	84
ConflictResource . . . . .	85
DeployVMAmountQuotaReached . . . . .	86
DeployVDCAmountQuotaReached . . . . .	87
DeployPublicIPAmountQuotaReached . . . . .	88
UploadImageDuplicated . . . . .	89
UploadImageZipPartDuplicated . . . . .	90
NetConfigurePubIPForOneNic . . . . .	91
NetNotConfigurePubIPForTwoNic . . . . .	92
FatalError . . . . .	93
InternalError . . . . .	94
ServerBusy . . . . .	95
NetInsufficientMAC . . . . .	96
NetInsufficientVlan . . . . .	97
NetVlanAlreadyExist . . . . .	98
NetRegisterCustomerFail . . . . .	99
NetUnregisterCustmerFail . . . . .	100
NetCreateVMFail . . . . .	101
NetDeleteVMFail . . . . .	102
NfsVmAlreadyExist . . . . .	103
NfsVmIsDeploying . . . . .	104
NfsVmCountFull . . . . .	105
NfsDeployVmFail . . . . .	106

NfsDeployVmTimeout . . . . .	107
NfsPowerOnVmFail . . . . .	108
NfsNullInfraIp . . . . .	109
NfsWsNotStarted . . . . .	110

## Chapter 3

# Module Documentation

### 3.1 Compute Service REST API

#### Modules

- [Operations On VM](#)
- [Operations On VDC](#)
- [Operations On ORG](#)
- [Error Code](#)

#### 3.1.1 Detailed Description

This is the REST API for the Compute Service.

## 3.2 Operations On VM

### Modules

- [Get VM Information](#)
- [Power Off VM](#)
- [Power On VM](#)
- [Reset VM](#)
- [Suspend VM](#)
- [Resume VM](#)
- [Clone VM](#)
- [Delete VM](#)
- [Get VM Management Action List](#)
- [Update VM Instance Type](#)
- [Get VM List](#)
- [Get VM's Virtualnic Information](#)
- [Get VM's Virtualnic List](#)

## 3.3 Operations On VDC

### Modules

- [Upload Image To VDC](#)
- [Deploy NFS server](#)
- [Get VDC Information](#)
- [Get VDC List Under Organization](#)
- [Get Network List](#)
- [Get Network Information](#)
- [Enable NFS access to Atmos](#)
- [Resync NFS access to Atmos](#)

## 3.4 Operations On ORG

### Modules

- [List Uploaded Image](#)
- [Delete Uploaded Image](#)
- [Deploy Uploaded Image](#)
- [Get Organization List](#)
- [Get Organization Information](#)
- [Get Task](#)
- [Get Task List](#)

## 3.5 Error Code

### Modules

- Failed Response
- DuringDeleting
- ReservedName
- UnsupportedVersion
- DeployBadVMImageLackVMDK
- DeployBadVMImageLackVMX
- UploadImageAmountQuotaReached
- UploadImageSizeQuotaReached
- UploadFileFailed
- XMLValidationError
- XMLMalformed
- InvalidName
- InvalidState
- InvalidArgument
- ConcurrentAccess
- VMCannotGetState
- VMOperationFailed
- VMSetInstanceTypeFailed
- DeployInvalidMD5
- DeployInvalidManifestCountNotEqual
- DeployInvalidManifestIndexNotCorrect
- DeployBadVMImageInvalidConfig
- DeployImageNotFound
- DeployManifestFileNotFound
- DeployImageZipPartNotFound
- AuthenticationError
- NoPermission
- ObjectNotFound
- NoLongerExist
- NotSupported
- CommonPortalLastCaaSAdmin
- ObjectDuplicated
- ConflictResource
- DeployVMAmountQuotaReached
- DeployVDCAmountQuotaReached
- DeployPublicIPAmountQuotaReached
- UploadImageDuplicated
- UploadImageZipPartDuplicated
- NetConfigurePubIPForOneNic
- NetNotConfigurePubIPForTwoNic
- FatalError
- InternalError
- ServerBusy
- NetInsufficientMAC
- NetInsufficientVlan
- NetVlanAlreadyExist

- [NetRegisterCustomerFail](#)
- [NetUnregisterCustmerFail](#)
- [NetCreateVMFail](#)
- [NetDeleteVMFail](#)
- [NfsVmAlreadyExist](#)
- [NfsVmIsDeploying](#)
- [NfsVmCountFull](#)
- [NfsDeployVmFail](#)
- [NfsDeployVmTimeout](#)
- [NfsPowerOnVmFail](#)
- [NfsNullInfraIp](#)
- [NfsWsNotStarted](#)
- [NfsNullParam](#)
- [NfsNullStorageIp](#)
- [NfsWsException](#)
- [NfsVMNotFound](#)
- [NfsVersionNotSupport](#)
- [NfsNullSubscriptionId](#)
- [NfsListAllTokensFail](#)
- [NfsSetRmgIpFail](#)
- [NfsSetHostsFail](#)
- [NfsUploadFail](#)
- [CommonPortalErrorGeneral](#)
- [CommonPortalNoCaaSSub](#)
- [CommonPortalNoMaaSSub](#)
- [CommonPortalInvalidCaaSSubId](#)
- [CommonPortalCannotProvision](#)
- [CommonPortalSubCaaSError](#)
- [CommonPortalGetAccountUsersError](#)
- [CommonPortalProvisionMaaSError](#)
- [CommonPortalAccountNotExist](#)
- [CommonPortalMultipleProvision](#)
- [MeteringQueryError](#)

## 3.6 Get VM Information

Returns information about the specified virtual machine. The information includes:

- The VM instance type (small, medium, or large).
- The list of virtual NICs for this VM.
- The list of management actions allowed on this VM such as, power-off, reset, power-on, suspend, resume, and clone.
- The VM's public IP address (if it has one).
- The fully qualified domain name.

### Type

Synchronous

### Role

Admin

### Schema

caas-mo-vm.xsd

### URI Syntax

<version-number>/org/<org-name>/vdc/<vdc-name>/vm/<vm-name>

Example:

1.0.0.0/org/caas/vdc/caasvdc/vm/caasvm

### HTTP Method

GET

### Request Body

No Request Body

### Successful Response

Example:

```
<VirtualMachine xmlns="http://www.emc.com/caas" name="caasvm1">
  <status>powered-off</status>
  <virtual-nic-list href="1.0.0.0/org/caas/vdc/caasvdc/vm/caasvm1/virtualnic"/>
  <management-action-list href="1.0.0.0/org/caas/vdc/caasvdc/vm/caasvm1/mgmt"/>
  <instance-type>large</instance-type>
  <public-ip>yes</public-ip>
  <fqdn>vm1.cloud.corp.emc.com</fqdn>
  <disk-size>1024</disk-size>
</VirtualMachine>
```

**Possible Error Codes**[UnsupportedVersion](#)[ObjectNotFound](#)[AuthenticationError](#)[NoPermission](#)[FatalError](#)

## 3.7 Power Off VM

Use to power-off the specified virtual machine. Returns a task ID.

**Type**

Asynchronous

**Role**

Admin

**Schema**

No Schema

**URI Syntax**

<version-number>/org/<org-name>/vdc/<vdc-name>/vm/<vm-name>/mgmt/power-off

Example:

1.0.0.0/org/caas/vdc/caasvdc/vm/caasvm/mgmt/power-off

**HTTP Method**

POST

**Request Body**

No Request Body

**Successful Response**

202 Accepted

Location: <version-number>/org/<org-name>/task/<id>

Example:

202 Accepted

Location: 1.0.0.0/org/caas/task/task-30

**Possible Error Codes**

[UnsupportedVersion](#)

[ObjectNotFound](#)

[AuthenticationError](#)

[NoPermission](#)

[InvalidState](#)

[InvalidName](#)

[VMCannotGetState](#)

[VMOperationFailed](#)

[FatalError](#)

## 3.8 Power On VM

Use to power-on the specified virtual machine. Returns a task ID.

**Type**

Asynchronous

**Role**

Admin

**Schema**

No Schema

**URI Syntax**

<version-number>/org/<org-name>/vdc/<vdc-name>/vm/<vm-name>/mgmt/power-on

Example:

1.0.0.0/org/caas/vdc/caasvdc/vm/caasvm/mgmt/power-on

**HTTP Method**

POST

**Request Body**

No Request Body

**Successful Response**

202 Accepted

Location: <version-number>/org/<org-name>/task/<id>

Example:

202 Accepted

Location: 1.0.0.0/org/caas/task/task-30

**Possible Error Codes**

[UnsupportedVersion](#)

[ObjectNotFound](#)

[AuthenticationError](#)

[NoPermission](#)

[InvalidState](#)

[InvalidName](#)

[VMCannotGetState](#)

[VMOperationFailed](#)

[FatalError](#)

## 3.9 Reset VM

Use to reset the specified virtual machine. Returns a task ID.

**Type**

Asynchronous

**Role**

Admin

**Schema**

No Schema

**URI Syntax**

<version-number>/org/<org-name>/vdc/<vdc-name>/vm/<vm-name>/mgmt/reset

Example:

Location: 1.0.0.0/org/caas/vdc/caasvdc/vm/caasvm/mgmt/reset

**HTTP Method**

POST

**Request Body**

No Request Body

**Successful Response**

202 Accepted

Location: <version-number>/org/<org-name>/task/<id>

Example:

202 Accepted

Location: 1.0.0.0/org/caas/task/task-30

**Possible Error Codes**

[UnsupportedVersion](#)

[ObjectNotFound](#)

[AuthenticationError](#)

[NoPermission](#)

[InvalidState](#)

[InvalidName](#)

[VMCannotGetState](#)

[VMOperationFailed](#)

[FatalError](#)

## 3.10 Suspend VM

Use to suspend the specified virtual machine. Returns a task ID.

**Type**

Asynchronous

**Role**

Admin

**Schema**

No Schema

**URI Syntax**

<version-number>/org/<org-name>/vdc/<vdc-name>/vm/<vm-name>/mgmt/suspend

Example:

1.0.0.0/org/caas/vdc/caasvdc/vm/caasvm/mgmt/suspend

**HTTP Method**

POST

**Request Body**

No Request Body

**Successful Response**

202 Accepted

Location: <version-number>/org/<org-name>/task/<id>

Example:

202 Accepted

Location: 1.0.0.0/org/caas/task/task-30

**Possible Error Codes**

[UnsupportedVersion](#)

[ObjectNotFound](#)

[AuthenticationError](#)

[NoPermission](#)

[InvalidState](#)

[InvalidName](#)

[VMCannotGetState](#)

[VMOperationFailed](#)

[FatalError](#)

## 3.11 Resume VM

Use to resume a suspended virtual machine. Returns a task ID.

**Type**

Asynchronous

**Role**

Admin

**Schema**

No Schema

**URI Syntax**

<version-number>/org/<org-name>/vdc/<vdc-name>/vm/<vm-name>/mgmt/resume

Example:

1.0.0.0/org/caas/vdc/caasvdc/vm/caasvm/mgmt/resume

**HTTP Method**

POST

**Request Body**

No Request Body

**Successful Response**

202 Accepted

Location: <version-number>/org/<org-name>/task/<id>

Example:

202 Accepted

Location: 1.0.0.0/org/caas/task/task-30

**Possible Error Codes**

[UnsupportedVersion](#)

[ObjectNotFound](#)

[AuthenticationError](#)

[NoPermission](#)

[InvalidState](#)

[InvalidName](#)

[VMCannotGetState](#)

[VMOperationFailed](#)

[FatalError](#)

## 3.12 Clone VM

Clones a VM. Returns a Task ID. The cloned VM:

- Is created within the same parent VDC as the one from which it was cloned.
- Uses the same resource pool as the one from which it is cloned.
- Uses the current datastore.

The cloning operation will fail if the VM you attempt to clone has a public IP, but you have already used your public IP quota for the VDC.

### Type

Asynchronous

### Role

Admin

### Schema

caas-mo-vm.xsd

### URI Syntax

`<version-number>/org/<org-name>/vdc/<vdc-name>/vm/<vm-name>/mgmt/clone-to-vm`

Example:

`1.0.0.0/org/caas/vdc/caasvdc/vm/caasvm/mgmt/clone-to-vm`

### HTTP Method

POST

### Request Body

`<VirtualMachine name="<clonename>"/>`

Example:

`<VirtualMachine name="caasvm"/>`

### Successful Response

202 Accepted

Location: `<version-number>/org/<org-name>/task/<id>`

Example:

202 Accepted

Location: `1.0.0.0/org/caas/task/task-30`

**Possible Error Codes**

UnsupportedVersion  
ObjectNotFound  
AuthenticationError  
NoPermission  
InvalidState  
ObjectDuplicated  
InvalidName  
FatalError  
DeployPublicIPAmountQuotaReached  
ReservedName  
DeployVMAmountQuotaReached

### 3.13 Delete VM

Deletes a VM from the specified VDC. Returns a task ID.

**Type**

Asynchronous

**Role**

Admin

**Schema**

No Schema

**URI Syntax**

<version-number>/org/<org-name>/vdc/<vdc-name>/vm/<vm-name>

Example:

1.0.0.0/org/caas/vdc/caasvdc/vm/caasvm

**HTTP Method**

DELETE

**Request Body**

No Request Body

**Successful Response**

202 Accepted

Location: <version-number>/org/<org-name>/task/<id>

Example:

202 Accepted

Location: 1.0.0.0/org/caas/task/task-30

**Possible Error Codes**

[UnsupportedVersion](#)

[ObjectNotFound](#)

[AuthenticationError](#)

[NoPermission](#)

[InvalidState](#)

[FatalError](#)

[InvalidName](#)

## 3.14 Get VM Management Action List

Returns the list of the management actions available for the specified VM. Management actions can include:

- power off
- power on
- reset
- resume
- suspend
- clone

The possible actions, at runtime, depend on the state of the VM. For example, if the VM is powered off, the only management actions that are available for that VM are power on and clone.

### Type

Synchronous

### Role

Admin

### Schema

caas-mo-vm.xsd

### URI Syntax

<version-number>/org/<org-name>/vdc/<vdc-name>/vm/<vm-name>/mgmt

Example:

1.0.0.0/org/caas/vdc/caasvdc/vm/caasvm/mgmt

### HTTP Method

GET

### Request Body

No Request Body

### Successful Response

Example:

200 OK

```
<VmManagementActionList xmlns="http://www.emc.com/caas">
  <management-action href="1.0.0.0/org/caas/vdc/caasvdc/vm/caasvm/mgmt/power-on"/>
  <management-action href="1.0.0.0/org/caas/vdc/caasvdc/vm/caasvm/mgmt/clone-on-vm"/>
</VmManagementActionList>
```

**Possible Error Codes**[UnsupportedVersion](#)[ObjectNotFound](#)[AuthenticationError](#)[NoPermission](#)[FatalError](#)

## 3.15 Update VM Instance Type

Use to change the VM instance type. Values are small, medium, and large. Returns a task ID.

**Type**

Asynchronous

**Role**

Admin

**Schema**

caas-mo-vm.xsd

**URI Syntax**

<version-number>/org/<org-name>/vdc/<vdc-name>/vm/<vm-name>

Example:

1.0.0.0/org/caas/vdc/caasvdc/vm/caasvm

**HTTP Method**

PUT

**Request Body**

<VirtualMachine><instance-type>small/medium/large</instance-type></VirtualMachine>

Example:

<VirtualMachine><instance-type>medium</instance-type></VirtualMachine>

**Successful Response**

202 Accepted Location:

<version-number>/org/<org-name>/task/<id>

Example:

202 Accepted Location:

1.0.0.0/org/caas/task/task-30

**Possible Error Codes**

[UnsupportedVersion](#)

[ObjectNotFound](#)

[XMLValidationError](#)

[AuthenticationError](#)

[NoPermission](#)

[InvalidState](#)

[InvalidName](#)

[ConflictResource](#)

[VMCannotGetState](#)

[VMOperationFailed](#)

[VMSetInstanceTypeFailed](#)

[FatalError](#)

## 3.16 Get VM List

Returns the list of VMs deployed to the specified VDC.

**Type**

Synchronous

**Role**

Admin

**Schema**

caas-mo-vm.xsd

**URI Syntax**

<version-number>/org/<org-name>/vdc/<vdc-name>/vm/

Example:

1.0.0.0/org/caas/vdc/caasvdc/vm/

**HTTP Method**

GET

**Request Body**

No Request Body

**Successful Response**

Example:

200 OK

```
<VirtualMachineList xmlns="http://www.emc.com/caas">
  <virtual-machine href="1.0.0.0/org/caas/vdc/caasvdc/caasvm1"/>
  <virtual-machine href="1.0.0.0/org/caas/vdc/caasvdc/caasvm2"/>
</VirtualMachineList>
```

**Possible Error Codes**

[UnsupportedVersion](#)

[ObjectNotFound](#)

[AuthenticationError](#)

[NoPermission](#)

[FatalError](#)

## 3.17 Get VM's Virtualnic Information

Returns the virtual NIC information for the specified VM. The information includes the following:

- Network name
- Fully qualified domain name
- IP address

### Type

Synchronous

### Role

Admin

### Schema

caas-mo-vm-dev.xsd

### URI Syntax

<version-number>/org/<org-name>/vdc/<vdc-name>/vm/<vm-name>/virtualnic/<virtualnic-name>

Example:

1.0.0.0/org/caas/vdc/caasvdc/vm/caasvm/virtualnic/Network Adapter 1

### HTTP Method

GET

### Request Body

No Request Body

### Successful Response

Example:

200 OK

```
<VirtualNic xmlns="http://www.emc.com/caas" name="Network Adapter 1">
  <network-name>VM Network</network-name>
  <host-name>hostname</host-name>
  <ip-address>192.168.1.100</ip-address>
</VirtualNic>
```

### Possible Error Codes

[UnsupportedVersion](#)

[ObjectNotFound](#)

[AuthenticationError](#)

[NoPermission](#)

[FatalError](#)

## 3.18 Get VM's Virtualnic List

Returns the list of Virtual NIC's for the specified VM.

**Type**

Synchronous

**Role**

Admin

**Schema**

caas-mo-vm-dev.xsd

**URI Syntax**

<version-number>/org/<org-name>/vdc/<vdc-name>/vm/<vm-name>/virtualnic

Example:

1.0.0.0/org/caas/vdc/caasvdc/vm/caasvm/virtualnic

**HTTP Method**

GET

**Request Body**

No Request Body

**Successful Response**

Example:

200 OK

```
<VirtualNicList xmlns="http://www.emc.com/caas">
  <virtual-nic href="1.0.0.0/org/caas/vdc/caasvdc/vm/caasvm/virtualnic/Network Adapter 1">
  <virtual-nic href="1.0.0.0/org/caas/vdc/caasvdc/vm/caasvm/virtualnic/Network Adapter 2">
</VirtualNicList>
```

**Possible Error Codes**

[UnsupportedVersion](#)

[ObjectNotFound](#)

[AuthenticationError](#)

[NoPermission](#)

[FatalError](#)

## 3.19 List Uploaded Image

Returns the names of the VM images that currently reside in the image store for the specified VDC.

### Type

Synchronous

### Role

Admin

### Schema

caas-mo-vm.xsd

### URI Syntax

<version-number>/org/<org-name>/imagestore

Example:

1.0.0.0/org/caas/imagestore

### HTTP Method

GET

### Request Body

No Request Body

### Successful Response

Example:

200 OK

```
<ImageList xmlns="http://www.emc.com/caas">
  <ImageList href="1.0.0.0/org/caas/imagestore/caasvm1"/>
  <ImageList href="1.0.0.0/org/caas/imagestore/caasvm2"/>
</ImageList>
```

### Possible Error Codes

[UnsupportedVersion](#)

[ObjectNotFound](#)

[AuthenticationError](#)

[NoPermission](#)

[FatalError](#)

Returns the names of the templates that currently reside in the template store.

### Type

Synchronous

**Role**

Admin

**Schema**

caas-mo-vm.xsd

**URI Syntax**

<version-number>/org/<org-name>/template

Example:

1.0.0.0/org/caas/template

**HTTP Method**

GET

**Request Body**

No Request Body

**Successful Response**

Example:

200 OK

```
<ImageList xmlns="http://www.emc.com/caas">
  <ImageList href="1.0.0.0/org/caas/template/template1"/>
  <ImageList href="1.0.0.0/org/caas/template/template2"/>
</ImageList>
```

**Possible Error Codes**

[UnsupportedVersion](#)

[ObjectNotFound](#)

[AuthenticationError](#)

[NoPermission](#)

[FatalError](#)

## 3.20 Upload Image To VDC

Uploads a VM image to the server. Once an image is uploaded, it can be deployed to the VDC. Before you can upload a VM image to the image repository, you must preprocess it using the CLI command `emc-caas-preuploadimage`. Only one image can reside in the image store at a time.

### Type

Synchronous

### Role

Admin

### Schema

`caas-mo-manifest.xsd`

### URI Syntax

`<version-number>/org/<org-name>/imagestore`

Example:

`1.0.0.0/org/caas/imagestore`

### HTTP Method

POST

### Request Body

The multipart form data. Here is an example for upload a file:

-- AaB03x

content-disposition: form-data; name="caasvm"

caasvm

-- AaB03x

content-disposition:form-data;name=="File"; filename="caasfile"

Content-Type: application/octet-stream

...file content...

-- AaB03x--

For more information, refer to RFC1867.

### Successful Response

200 OK

### Possible Error Codes

[UnsupportedVersion](#)

[XMLMalformed](#)

[XMLValidationError](#)  
[ObjectNotFound](#)  
[AuthenticationError](#)  
[NoPermission](#)  
[FatalError](#)  
[UploadImageSizeQuotaReached](#)  
[UploadImageAmountQuotaReached](#)  
[UploadFileFailed](#)  
[UploadImageZipPartDuplicated](#)  
[UploadImageDuplicated](#)  
[InvalidName](#)

## 3.21 Delete Uploaded Image

Deletes a VM image from the server.

**Type**

Synchronous

**Role**

Admin

**Schema**

No Schema

**URI Syntax**

<version-number>/org/<org-name>/imagestore/<image-name>

Example:

1.0.0.0/org/caas/imagestore/caasimage

**HTTP Method**

DELETE

**Request Body**

No Request Body

**Successful Response**

200 OK

**Possible Error Codes**

[UnsupportedVersion](#)

[ObjectNotFound](#)

[AuthenticationError](#)

[NoPermission](#)

[FatalError](#)

[InvalidName](#)

## 3.22 Deploy Uploaded Image

Deploys a VM image from the server to the VDC. Once a VM image is deployed, it can become a running instance. You can deploy the same image multiple times.

**Type**

Asynchronous

**Role**

Admin

**Schema**

caas-mo-vm.xsd

**URI Syntax**

<version-number>/org/<org-name>/imagestore/<image-name>

Example:

1.0.0.0/org/caas/imagestore/caasimage

**HTTP Method**

POST

**Request Body**

```
<VirtualMachine name="<deployedname>">
  <instance-type>small/medium/large</instance-type>
  <has-publicIP>true/false</has-publicIP>
</VirtualMachine>
```

Example:

```
<VirtualMachine name="caas_deploy">
  <instance-type>large</instance-type>
  <has-publicIP>true</has-publicIP>
</VirtualMachine>
```

**Successful Response**

202 Accepted

Location: <version-number>/org/<org-name>/task/<id>

Example:

202 Accepted

Location: 1.0.0.0/org/caas/task/task-30

**Possible Error Codes**

[UnsupportedVersion](#)  
[ObjectNotFound](#)  
[AuthenticationError](#)  
[NoPermission](#)  
[InvalidState](#)  
[ObjectDuplicated](#)  
[InvalidName](#)  
[ReservedName](#)  
[FatalError](#)  
[DeployVMAmountQuotaReached](#)  
[DeployBadVMImageLackVMDK](#)  
[DeployBadVMImageLackVMX](#)  
[NetConfigurePubIPForOneNic](#)  
[NetNotConfigurePubIPForTwoNic](#)  
[DeployPublicIPAmountQuotaReached](#)

## 3.23 Deploy NFS server

Enables NFS access to the Storage Service.

**Type**

Asynchronous

**Role**

Admin and Atmos Account Manager

**Schema**

caas-mo-vm.xsd

**URI Syntax**

<version-number>/org/<org-name>/vdc/<vdc-name>/imagestore/nfs

Example:

1.0.0.0/org/caas/vdc/caasvdc/imagestore/nfs

**HTTP Method**

POST

**Request Body**

```
<VirtualMachine name="<deployedname>">
</VirtualMachine>
```

Example:

```
<VirtualMachine name="nfsserver">
</VirtualMachine>
```

**Successful Response**

202 Accepted

Location: <version-number>/org/<org-name>/task/<id>

Example:

202 Accepted

Location: 1.0.0.0/org/caas/task/task-30

**Possible Error Codes**

[UnsupportedVersion](#)

[ObjectNotFound](#)

[AuthenticationError](#)

[NoPermission](#)

[InvalidState](#)

[ObjectDuplicated](#)

[InvalidName](#)

[FatalError](#)

## 3.24 Get VDC Information

Returns the list of virtual machines and networks currently deployed in the specified VDC.

### Type

Synchronous

### Role

Admin

### Schema

caas-mo-vdc.xsd

### URI Syntax

<version-number>/org/<org-name>/vdc/<vdc-name>

Example:

1.0.0.0/org/caas/vdc/vdc1

### HTTP Method

GET

### Request Body

No Request Body

### Successful Response

200 OK

```
<VirtualDataCenter xmlns="http://www.emc.com/caas" name="vdc1">
  <virtual-machine-list href="1.0.0.0/org/org1/vdc/vdc1/vm/" />
  <network-list href="1.0.0.0/org/org1/vdc/vdc1/network/" />
  <network-list href="1.0.0.0/org/org1/vdc/vdc1/imagestore/" />
</VirtualDataCenter>
```

Example:

200 OK

```
<VirtualDataCenter xmlns="http://www.emc.com/caas" name="vdc1">
  <virtual-machine-list href="1.0.0.0/org/org1/vdc/vdc1/vm/" />
  <network-list href="1.0.0.0/org/org1/vdc/vdc1/network/" />
  <network-list href="1.0.0.0/org/org1/vdc/vdc1/imagestore/" />
</VirtualDataCenter>
```

**Possible Error Codes**

UnsupportedVersion  
ObjectNotFound  
AuthenticationError  
NoPermission  
InvalidState  
ObjectDuplicated  
FatalError  
DeployVMAmountQuotaReached  
DeployBadVMImageLackVMDK  
DeployBadVMImageLackVMX  
UploadImageAmountQuotaReached

## 3.25 Get VDC List Under Organization

Returns the names of the VDCs that exist for the specified organization.

### Type

Synchronous

### Role

Admin

### Schema

caas-mo-vdc.xsd

### URI Syntax

<version-number>/org/<org-name>/vdc

Example:

1.0.0.0/org/caas/vdc

### HTTP Method

GET

### Request Body

No Request Body

### Successful Response

200 OK

```
<VirtualDataCenterList xmlns="http://www.emc.com/caas">
  <virtual-datacenter href="<vdc-url>" />
  <virtual-datacenter href="<vdc-url>" />
</VirtualDataCenterList>
```

Example:

200 OK

```
<VirtualDataCenterList xmlns="http://www.emc.com/caas">
  <virtual-datacenter href="1.0.0.0/org/org1/vdc/vdc1"/>
  <virtual-datacenter href="1.0.0.0/org/org1/vdc/vdc2"/>
</VirtualDataCenterList>
```

### Possible Error Codes

[UnsupportedVersion](#)

[ObjectNotFound](#)

[AuthenticationError](#)

NoPermission  
InvalidState  
ObjectDuplicated  
FatalError  
DeployVMAmountQuotaReached  
DeployBadVMImageLackVMDK  
DeployBadVMImageLackVMX  
UploadImageAmountQuotaReached

## 3.26 Get Network List

Use to obtain the list of networks for the specified VDC.

**Type**

Synchronous

**Role**

Admin

**Schema**

caas-mo-network.xsd

**URI Syntax**

<version-number>/org/<org-name>/vdc/<vdc-name>/network

Example:

1.0.0.0/org/caas/vdc/caasvdc/network

**HTTP Method**

GET

**Request Body**

No Request Body

**Successful Response**

Example:

200 OK

```
<NetworkList xmlns="http://www.emc.com/caas">
  <network href="1.0.0.0/org/caas/vdc/caasvdc/network/MyprivateNetwork1">
  <network href="1.0.0.0/org/caas/vdc/caasvdc/network/MyprivateNetwork2">
</NetworkList>
```

**Possible Error Codes**

[UnsupportedVersion](#)

[ObjectNotFound](#)

[AuthenticationError](#)

[NoPermission](#)

[FatalError](#)

## 3.27 Get Network Information

Use this method to obtain information about the specified network. It returns network scope which defines whether the named network is public or private.

**Type**

Synchronous

**Role**

Admin

**Schema**

caas-mo-network.xsd

**URI Syntax**

<version-number>/org/<org-name>/vdc/<vdc-name>/network/<network-name>

Example:

1.0.0.0/org/caas/vdc/caasvdc/network/MyprivateNetwork1

**HTTP Method**

GET

**Request Body**

No Request Body

**Successful Response**

Example:

200 OK

```
<Network xmlns="http://www.emc.com/caas" name="MyprivateNetwork1">
  <scope>private</scope>
</Network>
```

**Possible Error Codes**

[UnsupportedVersion](#)

[ObjectNotFound](#)

[AuthenticationError](#)

[NoPermission](#)

[FatalError](#)

## 3.28 Enable NFS access to Atmos

Enables access to the Atmos Online Storage Service through NFS.

**Type**

Asynchronous

**Role**

Admin and Atmos Account Manager

**Schema**

No Schema

**URI Syntax**

<version-number>/org/<org-name>/vdc/<vdc-name>/nfs

Example:

1.0.0.0/org/caas/vdc/caasvdc/nfs

**HTTP Method**

POST

**Request Body**

No Request Body

**Successful Response**

202 Accepted

Location: <version-number>/org/<org-name>/task/<id>

Example:

202 Accepted

Location: 1.0.0.0/org/caas/task/task-30

**Possible Error Codes**

[NfsVmAlreadyExist](#)

[NfsVmIsDeploying](#)

[NfsVmCountFull](#)

[NfsDeployVmFail](#)

[NfsDeployVmTimeout](#)

[NfsPowerOnVmFail](#)

[NfsNullInfraIp](#)

[NfsWsNotStarted](#)

[NfsNullParam](#)

[NfsNullStorageIp](#)  
[NfsWsException](#)  
[NfsVMNotFound](#)  
[NfsVersionNotSupport](#)  
[NfsNullSubscriptionId](#)  
[NfsListAllTokensFail](#)  
[NfsSetRmgIpFail](#)  
[NfsSetHostsFail](#)  
[NfsUploadFail](#)

## 3.29 Resync NFS access to Atmos

Use when you have added or removed Storage Service authentication tokens to ensure that NFS has the most up-to-date tokens.

### Type

Asynchronous

### Role

Admin and Atmos Account Manager

### Schema

No Schema

### URI Syntax

<version-number>/org/<org-name>/vdc/<vdc-name>/nfs

Example:

1.0.0.0/org/caas/vdc/caasvdc/nfs

### HTTP Method

PUT

### Request Body

No Request Body

### Successful Response

202 Accepted

Location: <version-number>/org/<org-name>/task/<id>

Example:

202 Accepted

Location: 1.0.0.0/org/caas/task/task-30

### Possible Error Codes

[NfsVmAlreadyExist](#)

[NfsVmIsDeploying](#)

[NfsVmCountFull](#)

[NfsDeployVmFail](#)

[NfsDeployVmTimeout](#)

[NfsPowerOnVmFail](#)

[NfsNullInfraIp](#)

[NfsWsNotStarted](#)

[NfsNullParam](#)

[NfsNullStorageIp](#)  
[NfsWsException](#)  
[NfsVMNotFound](#)  
[NfsVersionNotSupport](#)  
[NfsNullSubscriptionId](#)  
[NfsListAllTokensFail](#)  
[NfsSetRmgIpFail](#)  
[NfsSetHostsFail](#)  
[NfsUploadFail](#)

## 3.30 Get Organization List

Returns the list of organizations.

### Type

Synchronous

### Role

Admin

### Schema

caas-mo-org.xsd

### URI Syntax

<version-number>/org

Example:

1.0.0.0/org

### HTTP Method

GET

### Request Body

No Request Body

### Successful Response

Example:

200 OK

```
<OrganizationList xmlns="http://www.emc.com/caas">
  <organization href="1.0.0.0/org/caas1"/>
  <organization href="1.0.0.0/org/caas2"/>
</OrganizationList>
```

### Possible Error Codes

[UnsupportedVersion](#)

[ObjectNotFound](#)

[AuthenticationError](#)

[NoPermission](#)

[FatalError](#)

## 3.31 Get Organization Information

Use to obtain the list of VDCs and tasks for the specified organization.

**Type**

Synchronous

**Role**

Admin

**Schema**

caas-mo-org.xsd

**URI Syntax**

<version-number>/org/<org-name>

Example:

1.0.0.0/org/caas

**HTTP Method**

GET

**Request Body**

No Request Body

**Successful Response**

Example:

200 OK

```
<Organization xmlns="http://www.emc.com/caas" name="org1">
  <vdc-list href="1.0.0.0/org/caas/vdc"/>
  <task-list href="1.0.0.0/org/caas/task"/>
</Organization>
```

**Possible Error Codes**

[UnsupportedVersion](#)

[ObjectNotFound](#)

[AuthenticationError](#)

[NoPermission](#)

[FatalError](#)

### 3.32 Get Task

Returns the details of the specified task including:

- The task start and end time (in dateTime format).
- The task type. Valid types are:
  - PowerOnVm
  - PowerOffVm
  - SuspendVm
  - ResumeVm
  - ResetVm
  - CloneVm
  - UpdateVm
  - DeleteVDC
  - DeployVm
  - DeleteVm
  - CreateVDC
  - EnableNFS
  - ResyncNFS
- The status of the task. Valid statuses are:
  - completed
  - failed
  - started
  - starting
  - stopped
  - stopping
  - abandoned
  - unknown
  - running-overtime
- Whether the task can be cancelled (true or false).

**Type**

Synchronous

**Role**

Admin

**Schema**

caas-mo-task.xsd

**URI Syntax**

<version-number>/org/<org-name>/task/<task-id>

Example:

1.0.0.0/org/caas/task/task-30

**HTTP Method**

GET

**Request Body**

No Request Body

**Successful Response**

Example:

200 OK

```
<Task xmlns="http://www.emc.com/caas" name="task-112">
  <object-name>caasvm1</object-name>
  <start-time>2008-12-22T10:54:02.281+08:00</start-time>
  <end-time>2008-12-22T10:54:02.766+08:00</end-time>
  <type>DeleteVm</type>
  <status>success</status>
  <cancelable>false</cancelable>
</Task>
```

**Possible Error Codes**

[UnsupportedVersion](#)

[ObjectNotFound](#)

[AuthenticationError](#)

[NoPermission](#)

[FatalError](#)

### 3.33 Get Task List

Returns the list of tasks for the specified organization.

**Type**

Synchronous

**Role**

Admin

**Schema**

caas-mo-task.xsd

**URI Syntax**

<version-number>/org/<org-name>/task

Example:

1.0.0.0/org/caas/task

**HTTP Method**

GET

**Request Body**

No Request Body

**Successful Response**

Example:

200 OK

```
<TaskList xmlns="http://www.emc.com/caas">
  <task href="1.0.0.0/org/caas/task/task-1951">
  <task href="1.0.0.0/org/caas/task/task-1952">
</TaskList>
```

**Possible Error Codes**

[UnsupportedVersion](#)

[ObjectNotFound](#)

[AuthenticationError](#)

[NoPermission](#)

[FatalError](#)

## 3.34 Failed Response

Reponse body when API call fails.

### HTTP Response Body

```
<ErrorMessage xmlns="http://www.emc.com/caas">  
  <code>Error Code</code>  
  <message>Error Message</message>  
</ErrorMessage>
```

Example:

```
<ErrorMessage xmlns="http://www.emc.com/caas">  
  <code>ObjectNotFound</code>  
  <message>The virtual machine caasvm does not exist!</message>  
</ErrorMessage>
```

### 3.35 DuringDeleting

The resource is being deleted.

#### HTTP Status Code

400 Bad Request

## 3.36 ReservedName

The name you selected is reserved, please select another name.

### HTTP Status Code

400 Bad Request

### 3.37 UnsupportedVersion

The version specified in URL is an unsupported version.

#### HTTP Status Code

400 Bad Request

## **3.38 DeployBadVMImageLackVMDK**

Bad VM Image, VMDK file does not exist.

### **HTTP Status Code**

400 Bad Request

### 3.39 DeployBadVMImageLackVMX

Bad VM Image, VMX file does not exist.

#### HTTP Status Code

400 Bad Request

## 3.40 UploadImageAmountQuotaReached

You have reached the maximum number for uploaded images for this VDC. Please delete one uploaded image before uploading a new one.

### HTTP Status Code

400 Bad Request

### 3.41 UploadImageSizeQuotaReached

You have reached the maximum size for an uploaded image.

#### HTTP Status Code

400 Bad Request

## **3.42 UploadFileFailed**

Upload failed. Please try the upload again.

### **HTTP Status Code**

400 Bad Request

### 3.43 XMLValidationError

The XML did not validate against the published schema.

#### HTTP Status Code

400 Bad Request

## 3.44 XMLMalformed

The XML was not well-formed.

### HTTP Status Code

400 Bad Request

### 3.45 InvalidName

Invalid name.

#### HTTP Status Code

400 Bad Request

## 3.46 InvalidState

The attempted operation cannot be performed in the current state.

### HTTP Status Code

400 Bad Request

## 3.47 InvalidArgument

The argument is not valid.

### HTTP Status Code

400 Bad Request

## 3.48 ConcurrentAccess

Operation failed because another operation has modified the datastructure.

### HTTP Status Code

400 Bad Request

### 3.49 VMCannotGetState

Cannot get VM state.

#### HTTP Status Code

400 Bad Request

## **3.50 VMOperationFailed**

Operation on VM failed.

### **HTTP Status Code**

400 Bad Request

### 3.51 VMSetInstanceTypeFailed

Set VM instance type failed.

#### HTTP Status Code

400 Bad Request

## **3.52 DeployInvalidMD5**

File integrity check failed.

### **HTTP Status Code**

400 Bad Request

### 3.53 DeployInvalidManifestCountNotEqual

Manifest file is invalid, count of parts does not match the count in the manifest file.

#### HTTP Status Code

400 Bad Request

## **3.54 DeployInvalidManifestIndexNotCorrect**

Manifest file is invalid, part indexes are not correct.

### **HTTP Status Code**

400 Bad Request

### 3.55 DeployBadVMImageInvalidConfig

Bad VM Image, VM configuration format is invalid.

#### HTTP Status Code

400 Bad Request

## **3.56 DeployImageNotFound**

The VM image cannot found.

### **HTTP Status Code**

400 Bad Request

### 3.57 DeployManifestFileNotFound

The manifest file cannot found.

#### HTTP Status Code

400 Bad Request

## **3.58 DeployImageZipPartNotFound**

The VM image zip part cannot found.

### **HTTP Status Code**

400 Bad Request

## 3.59 AuthenticationError

Authentication Failed.

### HTTP Status Code

401 Unauthorized

## 3.60 NoPermission

You do not have permission to access the object.

### HTTP Status Code

403 Forbidden

## 3.61 ObjectNotFound

The specified object does not exist.

### HTTP Status Code

404 Not Found

## **3.62 NoLongerExist**

The specified object no longer exists.

### **HTTP Status Code**

404 Not Found

### 3.63 NotSupported

The attempted operation is not supported.

#### HTTP Status Code

405 Method Not Allowed

## 3.64 CommonPortalLastCaaSAdmin

The user is the last Compute Service admin of the organization. The operation failed.

### HTTP Status Code

405 Method Not Allowed

## 3.65 ObjectDuplicated

The object already exists in the same namespace. Please specify a different name and try again.

### HTTP Status Code

409 Conflict

## 3.66 ConflictResource

Resource is in use.

### HTTP Status Code

409 Conflict

### 3.67 DeployVMAmountQuotaReached

You have reached the maximum number of VMs for this VDC. You will need to delete VMs before you can deploy another one.

#### HTTP Status Code

409 Conflict

## 3.68 DeployVDCAmountQuotaReached

You have reached the maximum number of VDCs for the system. You will need to delete VDCs before creating any new one.

### HTTP Status Code

409 Conflict

### 3.69 DeployPublicIPAmountQuotaReached

You have reached the maximum number of public IP addresses for this VDC. You will need to delete VMs configured to use public IPs before deploying another one.

#### HTTP Status Code

409 Conflict

## **3.70 UploadImageDuplicated**

Image zip already exists, cannot upload again.

### **HTTP Status Code**

409 Conflict

### 3.71 UploadImageZipPartDuplicated

The VM image zip part already exists, cannot upload again.

#### HTTP Status Code

409 Conflict

## 3.72 NetConfigurePubIPForOneNic

Cannot configure a public IP for a VM that with one vnic.

### HTTP Status Code

417 Expectation Failed

### 3.73 NetNotConfigurePubIPForTwoNic

You must configure a public IP for a VM that with two vnics.

#### HTTP Status Code

417 Expectation Failed

## 3.74 FatalError

An unrecoverable has occurred, please call customer support.

### HTTP Status Code

500 Internal Server Error

## 3.75 InternalError

Server internal error.

### HTTP Status Code

500 Internal Server Error

## 3.76 ServerBusy

Server resource is busy, please wait 10 minutes and try again.

### HTTP Status Code

500 Internal Server Error

### 3.77 NetInsufficientMAC

Insufficient MAC Address.

#### HTTP Status Code

500 Internal Server Error

## 3.78 NetInsufficientVlan

Insufficient VLAN.

### HTTP Status Code

500 Internal Server Error

### 3.79 NetVlanAlreadyExist

VLANs already exist for this customer and VDC.

#### HTTP Status Code

500 Internal Server Error

## **3.80 NetRegisterCustomerFail**

Failed to provision network.

### **HTTP Status Code**

500 Internal Server Error

### 3.81 NetUnregisterCustmerFail

Failed to un-provision network.

#### HTTP Status Code

500 Internal Server Error

## 3.82 NetCreateVMFail

Failed to provision network for VM.

### HTTP Status Code

500 Internal Server Error

### 3.83 NetDeleteVMFail

Failed to un-provision network for VM.

#### HTTP Status Code

500 Internal Server Error

## 3.84 NfsVmAlreadyExist

NFS is already enabled.

### HTTP Status Code

500 Internal Server Error

### 3.85 NfsVmIsDeploying

NFS server is already deployed.

#### HTTP Status Code

500 Internal Server Error

## 3.86 NfsVmCountFull

Current NFS server count reached, unable to deploy new NFS server.

### HTTP Status Code

500 Internal Server Error

## 3.87 NfsDeployVmFail

Deploy NFS server failed.

### HTTP Status Code

500 Internal Server Error

## 3.88 NfsDeployVmTimeout

Deploy NFS server timeout.

### HTTP Status Code

500 Internal Server Error

## 3.89 NfsPowerOnVmFail

Power on NFS server failed.

### HTTP Status Code

500 Internal Server Error

## 3.90 NfsNullInfraIp

Cannot get NFS server infrastructure IP.

### HTTP Status Code

500 Internal Server Error

### 3.91 NfsWsNotStarted

Web server on NFS server is not started.

#### HTTP Status Code

500 Internal Server Error

## 3.92 NfsNullParam

Cannot get parameters from DB to configure NFS server.

### HTTP Status Code

500 Internal Server Error

### 3.93 NfsNullStorageIp

Cannot get NFS server storage IP.

#### HTTP Status Code

500 Internal Server Error

## 3.94 NfsWsException

Exception with web service on NFS server.

### HTTP Status Code

500 Internal Server Error

## 3.95 NfsVMNotFound

Cannot find NFS server, resync NFS is forbidden.

### HTTP Status Code

500 Internal Server Error

## **3.96 NfsVersionNotSupport**

The Compute Service and NFS server versions do not match.

### **HTTP Status Code**

500 Internal Server Error

### 3.97 NfsNullSubscriptionId

Cannot get Storage Service subscription ID.

#### HTTP Status Code

500 Internal Server Error

## 3.98 NfsListAllTokensFail

Call Storage Service listAllTokens failed.

### HTTP Status Code

500 Internal Server Error

## 3.99 NfsSetRmgIpFail

Exception configuring rmgiip.

### HTTP Status Code

500 Internal Server Error

## 3.100 NfsSetHostsFail

Exception configuring /etc/hosts file.

### HTTP Status Code

500 Internal Server Error

### 3.101 NfsUploadFail

Upload file failed.

#### HTTP Status Code

500 Internal Server Error

## 3.102 CommonPortalErrorGeneral

Common portal error.

### HTTP Status Code

500 Internal Server Error

### 3.103 CommonPortalNoCaaSSub

The account has no Compute Service subscription.

#### HTTP Status Code

500 Internal Server Error

## **3.104 CommonPortalNoMaaSSub**

The account has no Storage Service subscription.

### **HTTP Status Code**

500 Internal Server Error

### **3.105   CommonPortalInvalidCaaSSubId**

The Compute Service subscription ID is invalid for this account.

#### **HTTP Status Code**

500 Internal Server Error

## **3.106 CommonPortalCannotProvision**

You cannot provision te Compute Service in the current state.

### **HTTP Status Code**

500 Internal Server Error

### 3.107 CommonPortalSubCaaSError

Compute Service subscription error.

#### HTTP Status Code

500 Internal Server Error

## 3.108 CommonPortalGetAccountUsersError

Get users error.

### HTTP Status Code

500 Internal Server Error

### 3.109 CommonPortalProvisionMaaSError

Storage Service provision error.

#### HTTP Status Code

500 Internal Server Error

## 3.110 CommonPortalAccountNotExist

The account does not exist.

### HTTP Status Code

500 Internal Server Error

### 3.111 CommonPortalMultipleProvision

Another provision related to your identity is in progress. You cannot provision again.

#### HTTP Status Code

500 Internal Server Error

## 3.112 MeteringQueryError

An error occurred while querying metering data.

### HTTP Status Code

500 Internal Server Error
